

Dear MRPOA Members,

Happy Easter and Passover! Hope everyone is enjoying this spring long weekend.

We are monitoring spring water levels on the Moon River. At this point, the water on the Moon is approximately 2 feet above normal summer levels and rising. Conditions are typical of this time of year with the spring run off. Water levels on Lake Muskoka are drawn down 6 feet.

We will update this group as conditions change. As the snow and ice continues to melt, shorelines can be slippery and unstable. Continue to exercise caution when around the water. Low lying portions of known flood prone areas may be impacted as the melt continues and water levels rise over the next few weeks.

For more information on the MNRF's Flood Outlook for Muskoka, please refer to the article [linked here from Muskoka 411](#).

The township of Muskoka Lakes also has a site to keep the public informed about the state of water levels. The site includes a real time measurement of water levels on Lake Muskoka. We've included the link below for your reference.
